Testing infection-dependent hybrid effects in infected mice only (n = 133)

| Predictor Variable | Coefficient | 95% CI | P-value | 7 |
|------------------------------|-------------|--------------------|---------|-----|
| Subspecies genetic distance | 0.0233 | (0.0059, 0.0407) | 0.009 | ** |
| Hybridization distance (hHe) | 0.0670 | (0.0397, 0.0943) | < 0.001 | *** |
| Mean hybridization level | 0.0557 | (0.0373, 0.0740) | < 0.001 | *** |
| Sex difference | -0.0014 | (-0.0078, 0.0049) | 0.654 | |
| Subspecies genetic distance | -0.0877 | (-0.1428, -0.0326) | 0.002 | ** |
| | | | | |

¹ Significance: *** p < 0.001, ** p < 0.01, * p < 0.05, . p < 0.1
