

Sample characteristics of wild house mice from the Brandenburg hybrid zone

Total mice analyzed

Females: 167 (49.9%)

Males: 168 (50.1%)

Mice with infection status determined

Total: 185 (55.2%)¹

Uninfected: 93 (50.3%)

Infected: 92 (49.7%)

Hybrid index (mean $\pm$ SD)

Overall: 0.574 ± 0.360

Uninfected: 0.468 ± 0.382

Infected: 0.742 ± 0.267

Predicted weight loss (mean $\pm$ SD)

Overall: $9.96\% \pm 2.48\%$

Uninfected: $9.08\% \pm 2.33\%$

Infected: $10.34\% \pm 2.45\%$

¹ Infection status determined by qPCR and amplicon sequencing. HI ranges from 0 (*M. m. domesticus*) to 1 (*M. m. musculus*).
