

Table 2. Uninfected Subset Analysis

Constitutive hybrid costs assessment in uninfected populations (n = 171 individuals)

Predictor Variable	Coefficient (β)	95% CI	P-value	[†]
Subspecies genetic distance	-0.0060	(-0.0201, 0.0082)	0.409	
Hybridization distance (hHe)	-0.0169	(-0.0392, 0.0055)	0.139	
Mean hybridization level	-0.0785	(-0.0920, -0.0650)	< 0.001	***
Sex difference	0.0026	(-0.0028, 0.0081)	0.343	
Subspecies genetic distance	0.0078	(-0.0343, 0.0500)	0.716	

[†] Statistical significance: *** p < 0.001, ** p < 0.01, * p < 0.05, † p < 0.1
