

Table 2. Uninfected Subset Analysis

Constitutive hybrid costs assessment in uninfected populations (n = 171 individuals)

Predictor Variable	Coefficient (β)	95% CI	P-value	[†]
Subspecies genetic distance	-0.0062	(-0.0202, 0.0078)	0.386	
Hybridization distance (hHe)	-0.0134	(-0.0354, 0.0085)	0.231	
Mean hybridization level	-0.0820	(-0.0953, -0.0686)	< 0.001	***
Sex difference	0.0024	(-0.0030, 0.0079)	0.375	
Subspecies genetic distance	-0.0033	(-0.0449, 0.0382)	0.876	

[†] Statistical significance: *** p < 0.001, ** p < 0.01, * p < 0.05, † p < 0.1
