

Table 2. Key effects on immune-predicted weight loss			
Predictor	β (SE)	p-value	Biological Interpretation
Infection status	2.32** (0.80)	0.004	Infection increases predicted weight loss
Sex (Male vs Female)	-1.31 (0.74)	0.077	No main sex difference
M. m. musculus ancestry (HI)	-0.67 (0.83)	0.419	No main genetic effect
Sex $\times$ M. m. musculus ancestry	2.14* (0.83)	0.011	Males worsen with musculus genes
Linear regression on 304 mice with complete data. Model $R^2 = 0.093$
